KY-PZ100WU/WE/BU/BE How to update firmware

Use this procedure only when network settings are unavailable or when network functions do not operate normally.

■Preparation
    (1) Download the update file from the download site to the PC.
        Unzip the downloaded file in the PC.
        (Double-click the file to unzip automatically)
    (2) Insert a micro SDHC/SDXC memory card in the PC and check that there are no files in the card. If there are, delete all files.
    (3) Copy the unzipped update files to the memory card.
        Check that the directory in the memory card is as follows.
            ¥PRIVATE¥JVC¥KY-PZ100
    (4) Place the dummy file "UPDATE.ALL" in the KY-PZ100 folder.
        "UPDATE.ALL" is obtained by renaming "UPDATE.ALL" to an arbitrary file.
        (recommend text file)

■Execution
    (1) Insert the memory card into the microSD card slot when the camera is in activated state,
    (2) Updating starts automatically.
        During updating, a progress bar appears in SDI/HDMI Output (the following output screen).
        Power LED: blinking "Red"

Monitor screen

    (3) After updating is complete, "Complete" appears in the output screen.
        Power LED: blinking "Blue"

Monitor screen

    (4) After the memory card is removed, the camera will re-start automatically.

■When Updating Cannot Be Executed
　　When updating cannot be executed for some reason or other, "Update can't be Executed!" appears
　　in the output screen.
　　Power LED: blinking "Orange"
　　In this case, check that the update file is correct for the corresponding model.

　　　　　Monitor screen

■Update error
　　When updating starts but cannot be executed completed for some reason or other, "Update
　　Error!" appears in the output screen.
　　Power LED: blinking "Orange"
　　In this case, it could be a camera failure.

　　　　　Monitor screen

　　NOTE:
　　　　Updating is possible only when the camera has been activated normally.
